Dashboard Explanation

At the top of the dashboard, there is a bar chart displaying the amounts (in euros) for:

- Shipments that are currently in transit (**Not Delivered Shipments**)
- Delivered Shipments for which the courier hasn't remitted the payment (**Payments Not Remitted**)
- Delivered Shipments for which the courier has remitted (**Completed Transactions**)
- Total sales amounts across the mentioned categories (**Total Sales from Shipments**)
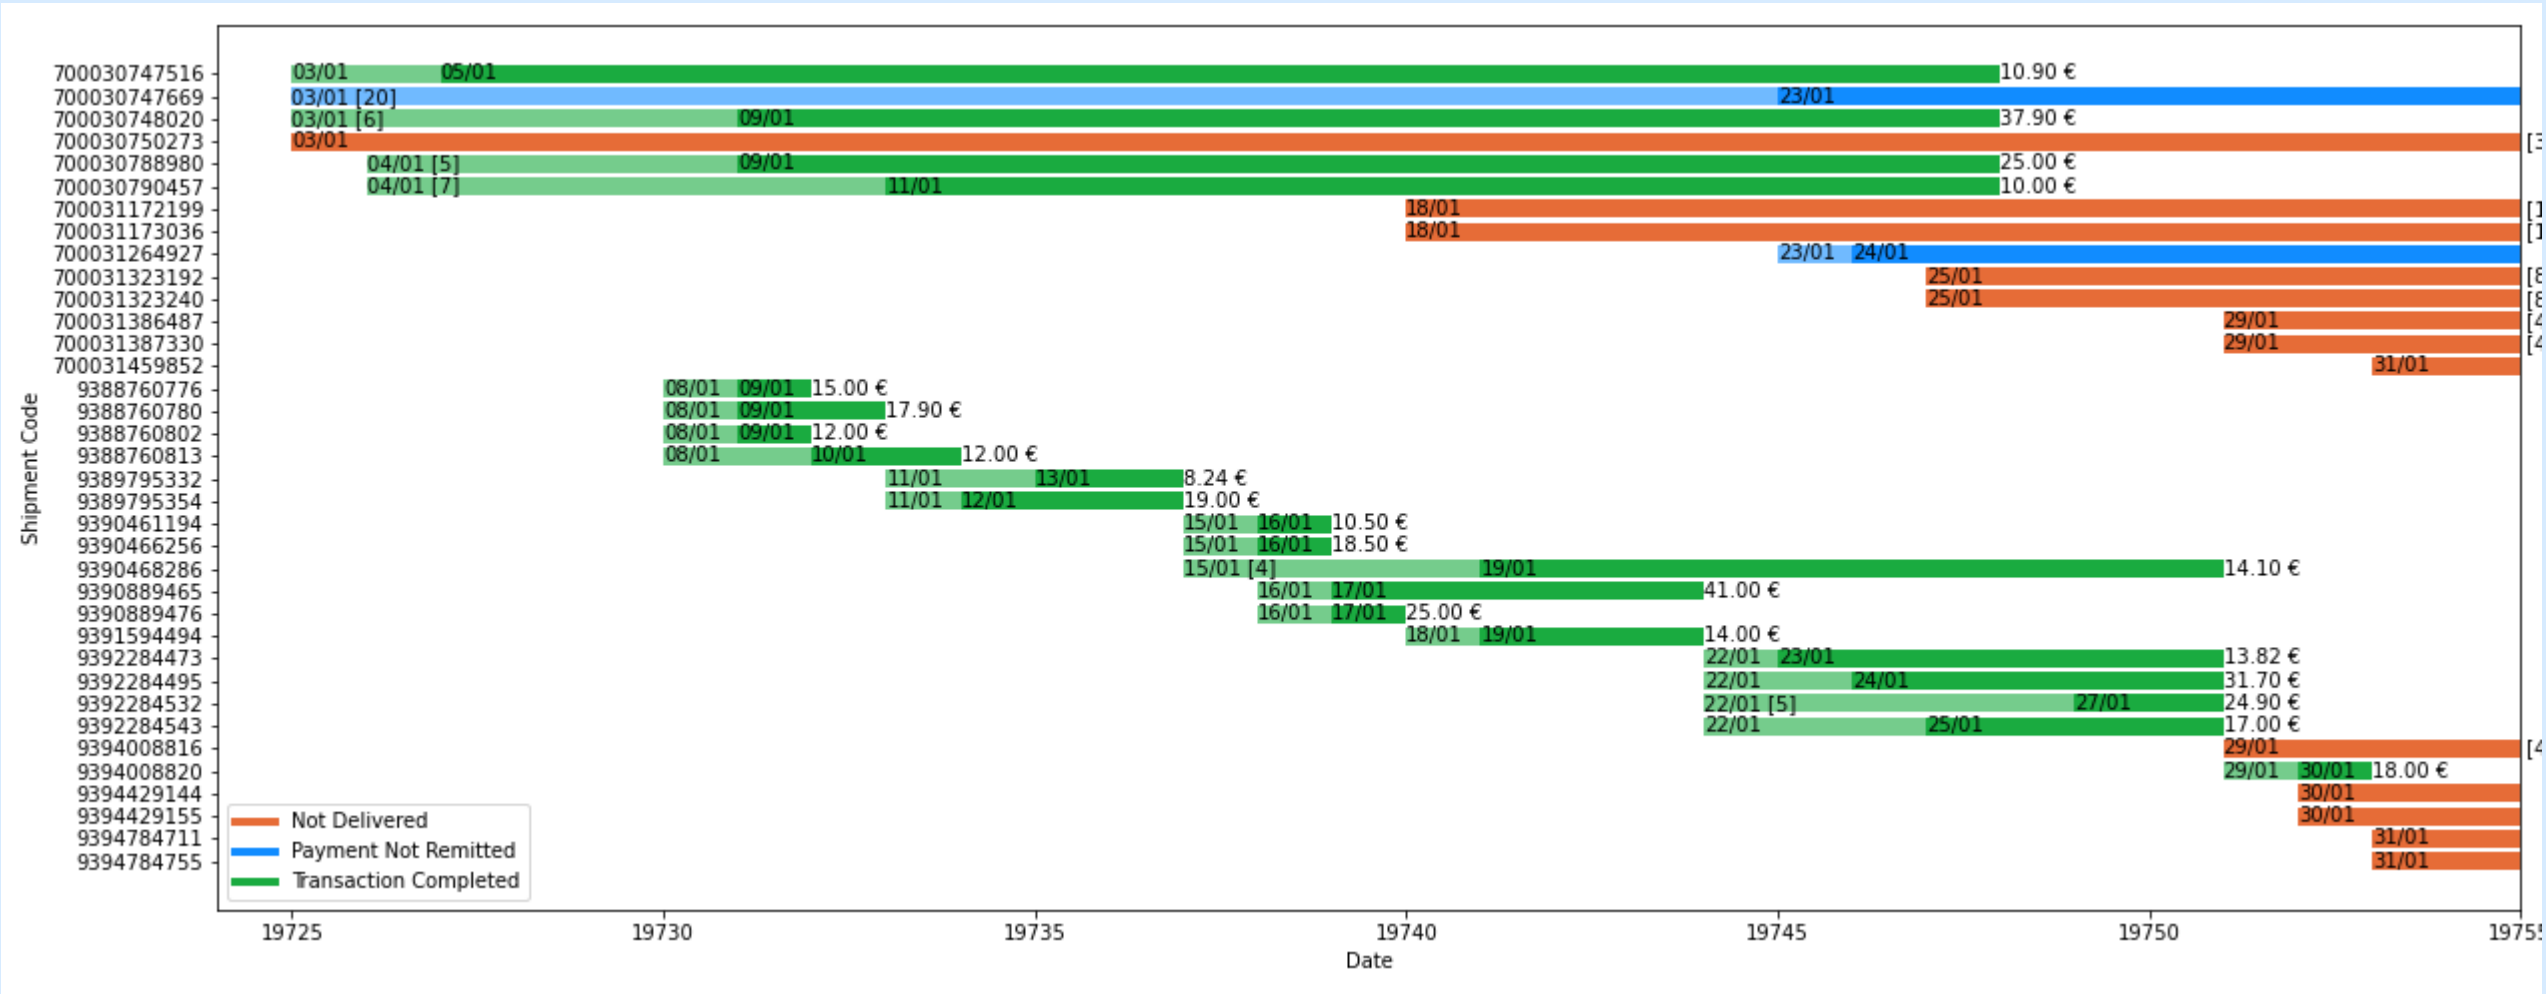

For each courier company, there's a gauge chart displaying the remitted sales amount in euros and a donut chart representing the sales percentage for each shipment status category. The column chart displays the number of shipments by status and courier company.

Interpretation of the Results

Based on the charts, SecureMail demonstrates better delivery and payment processing. As depicted in the donut chart, SecureMail has already completed 79.26% of the transactions. Additionally, the column chart indicates that SpeedMail has not yet delivered 8 out of 14 shipments.

However, it's essential to consider more factors such as shipment distance and receipt dates. For instance, packages received on a Friday may experience longer delivery times.

Shipments Status

This **Gantt chart** illustrates the status of each shipment:
- **Not Delivered**: Spanning from the receipt date to the delivery date
- **Payment Not Remitted**: Spanning from the delivery date to the remittance date
- **Completed Transaction**

The aim of this chart is to *track delivery times*, targeting shipments to be delivered within three days. Any shipment exceeding this limit will have its delay indicated on the chart. Similarly, delays in the duration between the delivery date and the remittance date will also be highlighted. The sales amount is displayed only for the completed transactions.

This chart provides a clear display of the shipment status, showing delivery time, sales amount, and the duration in days for each shipment to be completed.
